23 YEARS
TEACHING SESSIONS
LAUSANNE 1993-2016
EPFL - IML internship: general conditions

Internship period: From July to December

Length of the internship: Minimum 20 weeks

Student status: “Etudiant-stagiaire”, working permission for the foreign students; an alternative is also employee of the company

Proposal of subject: Will reflect company’s needs; Could be defined by the company and discussed directly with the chosen student; as an alternative, it could also be defined with the help of IML staff

Type of subject: Strategic / operational projects relevant for the company, and relate to the supply chain management

Coordination: Supervision from the company as well as IML team; intermediate reports and meetings according to an initial planning elaborated by the student should be organized by the student

Place of work: Ideally in the company; during the internship students may benefit from EPFL / IML infrastructure

Presentation of the work: End of November, in front of a jury composed by IML coordinating staff and the company representative(s)

Confidentiality: If requested by the company confidentiality is strictly respected

Proposition procedure: IML acts as an intermediary between companies and the students; meanwhile the students are searching for internships on their own;

Approaches for internship proposals:
1. The company formalizes the project and provides us with a written proposal explaining project mission, profile requirements, deadlines, contact information; the offer will be announced to the students, the students postulate and organize interviews with the company representative
2. The company consults the CV book, chooses the candidates whose profile suit the best to their requirements and contacts them directly; In parallel the company will inform us about this approach
3. The company will contact IML in order to define the project and contract (company, student, EPFL-IML)

For further information or for sending internship proposals please kindly contact:

Christiane Wahl
christiane.wahl@epfl.ch
Executive Master in Global Supply Chain Management

Organized in collaboration with the EPFL, the ENPC (Ecole des Ponts ParisTech) and the AFT-IFTIM group the program consists of 6 month theoretical part (academic program) followed by a practical project of 6 month (internship) which is to be carried out in a company.

General calendar
- Theoretical part January – July
- Practical project July - December

Theoretical part
The academic program consists of 5 blocks with forty-hour courses each, designed to expand the practical and methodological knowledge of the participants.

Each block has 4 modules that cover the latest developments in theory, tools and best practices in supply chain management. Every module has a formal evaluation and a qualifying exam synthesizes the material for all of the courses in the module.

In addition to the 20 weeks (5 blocks), 2 weeks business games oriented are organized (W1, W2). These business games are Web-based simulations in which players within a team use the Internet to collaborate, to reach decisions, to implement these decisions and to examine the results obtained. Some of the games are designed to develop a better understanding of fundamental supply chain concepts such as the Bullwhip effect and Risk pooling, but others are competitive games involving multi-enterprise strategic and tactical business decisions.

The teaching is ensured by both academics and business experts and is developed based on the methodology provided by the professors from universities involved in the program.

Practical part
Once the theoretical part is successfully accomplished, students must realize a practical project within a company (internship).

This project should be completed successfully over a minimum of 20 weeks. It gives students additional work experience and it is also a requirement to obtain the diploma.

The goal of the project is to realize a practical study or research showing high scientific capabilities, engineering knowledge and managing skills. The project could be operational or strategically oriented.

Academic staff supervises the practical project. It is completed within a company or in one of the research units of the organizing schools.

The report containing the results of the work must be presented in front of a jury.

>> Professional objective

After 10 years experience in charge of Customer Service, Sales and Purchasing Unit at 3 companies, I would like to have the opportunity to find a job within an integrated Supply Chain department and be able to go through the different levels (Execution, Monitoring, Design and Consulting) to put in practice what I have learned in my academic life. Ambitious, trustworthy, perseverant, reactive and results driven, I am looking for a challenging position that will enable me to increase my skills in Supply Chain in a multicultural and dynamic environment and let me participate to meet corporate strategy and customer expectations. As reflected in my CV, optimization in healthcare has been one of my great favorite, while this issue has been widely progressed recently. In this domain, I collaborated in a research project in designing the healthcare network in Tehran, capital of Iran; in order to facilitate the patients routing through the available transportation infrastructure. It is noteworthy that not only I have quite enough experience in healthcare system design, but also I am completely experienced in other domain of industrial engineering. I am quite a flexible person by working both as a member of a team or independently. I also believe that travelling under working missions would be a great opportunity to enhance my experience as well as my working skills.

>> Education

2016  
EPFL-IML, Switzerland, Executive Master in Global Supply Chain Management

2008-2011
