21 years
TEACHING SESSIONS
LAUSANNE 1993-2014
Executive Master in Global Supply Chain Management

Organized in collaboration with the EPFL, the ENPC (Ecole des Ponts ParisTech) and the AFT-IFTIM group the program consists of 6 month theoretical part (academic program) followed by a practical project of 6 month (internship) which is to be carried out in a company.

General calendar

- Theoretical part January – July
- Practical project July - December

Theoretical part

The theoretical program consists of 20 modules of 40 hours each, plus 3 weeks of case studies designed to enlarge the practical and methodological knowledge of the participants.

These modules cover the latest development in theory, tools and best practice in management and Logistics. The subjects are tackled concretely by case studies presented by business professionals and are developed from a methodological point of view by professors from universities involved in the program.

Practical part

Once the theoretical part is successfully accomplished, students must realize a practical project within a company (internship).

This project should be completed successfully over a minimum of 20 weeks. It gives students additional work experience and it is also a requirement to obtain the diploma.

The goal of the project is to realize a practical study or research showing high scientific capabilities, engineering knowledge and managing skills. The project could be operational or strategically oriented.

Academic staff supervises the practical project. It is completed within a company or in one of the research units of the organizing schools.

The report containing the results of the work must be presented in front of a jury.
**EPFL - IML internship: general conditions**

**Internship period:** From July to December

**Length of the internship:** Minimum 20 weeks

**Student status:** “Etudiant-stagiaire”, working permission for the foreign students; an alternative is also employee of the company

**Proposal of subject:** Will reflect company’s needs; Could be defined by the company and discussed directly with the chosen student; as an alternative, it could also be defined with the help of IML staff

**Type of subject:** Strategic / operational projects relevant for the company, and relate to the supply chain management

**Coordination:** Supervision from the company as well as IML team; intermediate reports and meetings according to an initial planning elaborated by the student should be organized by the student

**Place of work:** Ideally in the company; during the internship, students may benefit from EPFL / IML infrastructure

**Presentation of the work:** End of November, in front of a jury composed by IML coordinating staff and the company representative(s)

**Confidentiality:** If requested by the company confidentiality is strictly respected

**Proposition procedure:** IML acts as an intermediary between companies and the students; meanwhile the students are searching for internships on their own;

Approaches for internship proposals:

1. The company formalizes the project and provides us with a written proposal explaining project mission, profile requirements, deadlines, contact information; the offer will be announced to the students, the students postulate and organize interviews with the company representative

2. The company consults the CV book, chooses the candidates whose profile suit the best to their requirements and contacts them directly; In parallel the company will inform us about this approach

3. The company will contact IML in order to define the project and contract (company, student, EPFL-IML)

For further information or for sending internship proposals please kindly contact:

>> Professional objective

After two years in a multinational engineering and consulting company, where I could grow my communication and management technics, I decided to invest in the Supply Chain Management field as a high-stake discipline. I am particularly driven by the global End-to-end aspect of the Supply Chain management that is inclusive to all the project areas (from sourcing to customer) with regard to the Company’s values and strategy. I am therefore seeking the opportunity to be part of a working challenge, understand the interactions between the various chain players and deeply explore its different components to meet enhanced practical solutions.

Professional objective

I possess a wide experience in Operations and Customer Service within the Supply Chain organization with blended background in analysis, project execution, process development, order management, and team leadership.

I have solid international experience in Spain, Switzerland, Hungary and Portugal where I liaise and coordinate effectively across multiple divisions and virtual teams in different locations around the world, resulting in attainment of key organizational goals.

My professional objective is to find a position that allows me to increase my knowledge on the Supply Chain within a multi-national and multi-cultural environment with preference for the Medical/Pharmaceutical, Trading and Luxury industry. Willing to reallocate if the position is worthy.

>> Professional objective

Within my studies in International Relations and work experience in UNCTAD, I determined that the link between the environment and the Supply Chain are intertwined at an operational level. This Master programme and the internship option presents an opportunity for hands on experience in a vital section within all companies and organisations. My background allows me understand Supply Chain in segments as a whole, identifying potential causes for disruptions in the process, such as climate change, sustainability issues, even economic and social instability. With my previous Masters I realized that Climate Change and sustainability issues are determinant factors affecting costs and efficiency throughout the supply chain. Sustainability within the Supply Chain can become a strategic differentiator for any organisation. My objective is to apply the knowledge gained during this programme, combined with my previous studies and experience, to assist your organisation, evaluate and leverage key strategic approaches within the Supply Chain of their logistics team.
